

Computing at Hackwood Primary Academy

Intent

Through our computing curriculum at Hackwood, we aim to give the children the **skills** and understanding that is required to live and thrive in a technological world. We want them to be able to think creatively and **imaginatively** to solve problems and overcome challenges. They will be able to experience and **investigate** different computer programs and develop an understanding on when, where and why these are used. They will develop the **practical** skills to use technology in their everyday lives as well as being able to use it in more creative ways.

They will be able to **reflect** on the positives and negatives of technology in their lives, allowing them to **enjoy** using it whilst keeping themselves safe by understanding the correct procedure and who to alert if they feel unsafe.
